

Onboard.AI

A Futuristic Agentic AI Architecture for Corporate Client Onboarding

Design premise. Replace traditional fixed BPM orchestration with a governed agentic mesh. Use narrowly scoped specialist agents, deterministic controls and authoritative tools; bring humans into the loop only for ambiguity, judgement, mandated approvals and material exceptions.

Agent Catalogue

Orchestration

Agent	Focused skills / responsibilities
Onboarding Orchestrator Agent	Creates and manages the onboarding mission; decomposes goals; invokes specialist agents; tracks dependencies and state; does not make specialist compliance decisions.
Journey Planning Agent	Builds an execution plan from entity, countries, booking locations, products and requested services.
Task Dependency Agent	Determines parallel tasks and prerequisites.
Case State Agent	Maintains authoritative onboarding state and completion status.
Exception Routing Agent	Routes unresolved exceptions to the appropriate specialist agent or human queue.
SLA Management Agent	Tracks milestones, ageing and SLA risk; recommends escalation.
Human Intervention Agent	Creates structured HITL tasks with evidence, issue, recommendation and required decision.
Resume & Recovery Agent	Resumes interrupted agentic workflows from persisted checkpoints.

Client Initiation

Agent	Focused skills / responsibilities
Prospect Intake Agent	Receives onboarding requests from CRM and validates mandatory initiation information.
Intent Interpretation Agent	Converts business onboarding intent into structured requirements.
Existing Client Detection Agent	Determines whether the prospect already exists within the bank.
Onboarding Scope Agent	Establishes entities, products, markets, booking locations and services in scope.
Journey Classification Agent	Classifies new-to-bank, existing-to-bank, new product, new market, periodic review or remediation.

Entity Resolution

Agent	Focused skills / responsibilities
Entity Search Agent	Searches internal client masters and approved external sources.
Entity Matching Agent	Performs deterministic and probabilistic matching against candidate entities.
Entity Resolution Agent	Maps external identifiers and source records to internal client identifiers.
Duplicate Detection Agent	Identifies duplicate client and related-party records.
Entity Identity Confidence Agent	Calculates match confidence and escalates ambiguous matches.
Identifier Validation Agent	Validates LEI, registration numbers, tax identifiers and other identifiers.

External Data

Agent	Focused skills / responsibilities
External Data Discovery Agent	Determines which approved providers can supply required information.
Provider Selection Agent	Selects sources based on attribute, jurisdiction, freshness and authority.
Company Registry Agent	Retrieves authoritative corporate registry information.
Market Data Agent	Retrieves permitted market and reference data.
LEI Data Agent	Retrieves and validates LEI information.
External Data Normalisation Agent	Maps provider-specific data into the canonical onboarding model.
Source Reconciliation Agent	Identifies conflicting attributes across sources.
Data Freshness Agent	Determines whether previously sourced information remains usable.
Data Provenance Agent	Records source, retrieval time, evidence and transformation lineage.

Client Data

Agent	Focused skills / responsibilities
Legal Entity Profile Agent	Builds the core legal-entity profile.
Address Agent	Validates registered, operating and correspondence addresses.
Business Activity Agent	Determines and classifies nature of business.
Industry Classification Agent	Maps activities to approved industry taxonomies.

Agent	Focused skills / responsibilities
Country Exposure Agent	Identifies countries of incorporation, operation and business exposure.
Financial Information Agent	Extracts and structures permitted financial information.
Client Data Gap Agent	Identifies missing mandatory attributes.
Data Conflict Resolution Agent	Presents conflicting authoritative information for resolution.

Ownership & Control

Agent	Focused skills / responsibilities
Ownership Discovery Agent	Finds shareholders and ownership relationships.
Ownership Graph Agent	Constructs a multi-level legal ownership graph.
Ownership Unwrapping Agent	Recursively unwraps ownership until policy-defined stopping conditions.
UBO Identification Agent	Identifies candidate beneficial owners using policy thresholds.
Control Person Agent	Identifies persons exercising control independent of ownership.
Related Party Agent	Identifies directors, signatories, trustees, settlors and other related parties.
Complex Structure Agent	Detects circular ownership, nominee structures, trusts and opaque structures.
Ownership Evidence Agent	Verifies ownership assertions against documentary and external evidence.

Document Requirements

Agent	Focused skills / responsibilities
Document Requirement Agent	Determines required documents using an approved policy/rules service.
Document Deduplication Agent	Consolidates duplicate requirements across products and jurisdictions.
Document Substitution Agent	Determines whether authoritative external data can replace documents.
Document Request Agent	Creates precise client document requests.
Document Intake Agent	Classifies received documents.
Document Extraction Agent	Extracts structured fields from documents.
Document Validation Agent	Validates completeness, dates and expected attributes.
Document Authenticity Agent	Performs available authenticity and tampering checks.

Agent	Focused skills / responsibilities
Document Expiry Agent	Identifies expired or soon-to-expire documents.
Document-to-Data Reconciliation Agent	Compares extracted information against stored client data.

Policy & Rules

Agent	Focused skills / responsibilities
Policy Retrieval Agent	Retrieves only applicable approved policy sections.
Policy Applicability Agent	Determines applicable policies from jurisdiction, entity and product.
Rule Execution Agent	Calls deterministic rule engines and interprets structured outputs.
Policy Exception Agent	Detects where standard policy conditions cannot be satisfied.
Policy Evidence Agent	Links every policy-driven requirement or decision to source policy and rule.
Regulatory Change Impact Agent	Maps approved policy changes to impacted onboarding requirements.

KYC

Agent	Focused skills / responsibilities
KYC Scope Agent	Determines required KYC activities.
Customer Type Classification Agent	Classifies the entity into policy-defined customer types.
KYC Data Sufficiency Agent	Determines whether sufficient verified information exists.
KYC Risk Factor Agent	Identifies relevant risk factors without independently calculating final risk.
KYC Risk Assessment Agent	Calls the approved deterministic risk-rating service.
Enhanced Due Diligence Agent	Determines EDD requirements from policy and risk outputs.
Source of Funds Agent	Evaluates available source-of-funds evidence.
Source of Wealth Agent	Evaluates required source-of-wealth information where applicable.
KYC Completion Agent	Verifies mandatory KYC conditions before recommendation.

Screening

Agent	Focused skills / responsibilities
Screening Scope Agent	Determines which entities and related parties require screening.
Name Preparation Agent	Generates controlled name variants and aliases for screening.
Sanctions Screening Agent	Calls the approved sanctions screening platform.
PEP Screening Agent	Calls the approved PEP screening service.
Adverse Media Search Agent	Performs controlled searches across approved information sources.
Screening Match Triage Agent	Classifies potential matches using approved evidence.
Screening Evidence Agent	Compiles evidence for potential screening matches.
False Positive Resolution Agent	Applies approved deterministic disposition criteria.
Screening Escalation Agent	Routes unresolved potential matches to specialist investigators.

Financial Crime

Agent	Focused skills / responsibilities
FCC Risk Agent	Consolidates approved financial-crime risk indicators.
Jurisdiction Risk Agent	Retrieves approved country and jurisdiction risk classifications.
Industry Risk Agent	Retrieves approved sector risk classifications.
Business Model Risk Agent	Assesses risk indicators associated with business activity.
Complex Ownership Risk Agent	Identifies financial-crime risk signals from ownership complexity.
FCC Escalation Agent	Prepares evidence packages for FCC specialist review.

Tax & Regulatory

Agent	Focused skills / responsibilities
Tax Classification Agent	Determines the required tax classification workflow.
FATCA Agent	Collects and validates FATCA classification evidence.
CRS Agent	Collects and validates CRS classification evidence.
Regulatory Classification Agent	Coordinates applicable regulatory classifications.
MiFID Classification Agent	Supports MiFID client categorisation where applicable.

Agent	Focused skills / responsibilities
EMIR Classification Agent	Supports EMIR classification where applicable.
Dodd-Frank Classification Agent	Supports applicable Dodd-Frank classifications.
Regulatory Evidence Agent	Maintains evidence supporting regulatory classifications.

Product & Booking

Agent	Focused skills / responsibilities
Product Eligibility Agent	Checks whether requested products are available to the entity.
Booking Location Agent	Determines required onboarding scope by booking location.
Jurisdiction Eligibility Agent	Checks cross-border and jurisdiction restrictions.
Product Requirement Agent	Determines incremental requirements created by each product.
Product Suitability Agent	Invokes relevant suitability or appropriateness controls where required.
Cross-Border Rules Agent	Executes approved cross-border rule services.

Credit & Commercial

Agent	Focused skills / responsibilities
Credit Requirement Agent	Determines whether credit assessment is required.
Credit Data Collection Agent	Assembles required credit information.
Credit Case Initiation Agent	Initiates downstream credit workflows.
Commercial Approval Agent	Determines required business approvals.
Pricing/Revenue Context Agent	Retrieves approved commercial context for prioritisation, not compliance decisions.

Contracts & Accounts

Agent	Focused skills / responsibilities
Agreement Requirement Agent	Identifies required legal agreements.
Agreement Status Agent	Checks whether valid agreements already exist.
Account Requirement Agent	Determines accounts and facilities requiring setup.

Agent	Focused skills / responsibilities
Account Opening Agent	Submits validated account-opening instructions.
Static Data Setup Agent	Coordinates approved static-data creation.
SSI Agent	Validates standing settlement instruction requirements.

Client Interaction

Agent	Focused skills / responsibilities
Client Communication Agent	Generates controlled, context-specific client communications.
Information Request Agent	Requests missing information in plain language.
Clarification Agent	Asks targeted questions when supplied information is ambiguous.
Reminder Agent	Sends approved reminders based on SLA and outstanding requirements.
Client Response Interpretation Agent	Converts client responses into structured onboarding updates.
Relationship Manager Copilot Agent	Summarises status, blockers and required RM actions.

Quality & Controls

Agent	Focused skills / responsibilities
Completeness Control Agent	Checks all mandatory activities and evidence.
Data Quality Agent	Applies data-quality controls to onboarding information.
Cross-Source Consistency Agent	Checks consistency across registry, documents, declarations and internal records.
Evidence Sufficiency Agent	Determines whether each assertion has acceptable evidence.
Decision Consistency Agent	Checks decisions against comparable rule outcomes.
Four-Eyes Requirement Agent	Determines where mandatory maker-checker controls apply.
Quality Assurance Agent	Performs independent final control review.

Decisioning

Agent	Focused skills / responsibilities
Decision Readiness Agent	Determines whether the case is ready for decision.

Agent	Focused skills / responsibilities
Approval Requirement Agent	Determines which human or system approvals are legally or policy required.
Recommendation Agent	Produces an evidence-backed approve, reject or escalate recommendation.
Decision Explanation Agent	Creates traceable explanations referencing evidence and rules.
Residual Risk Agent	Identifies unresolved risks that must accompany approval.

Fulfilment

Agent	Focused skills / responsibilities
Fulfilment Orchestrator Agent	Coordinates downstream setup after approval.
Client Master Creation Agent	Submits approved golden-record creation or update.
Product Setup Agent	Coordinates product-specific provisioning.
Entitlement Agent	Coordinates approved user and access entitlement requests.
Activation Verification Agent	Confirms required downstream setup completed successfully.

Audit & Governance

Agent	Focused skills / responsibilities
Audit Trail Agent	Records every agent action, tool call, evidence input and decision.
Decision Lineage Agent	Maintains requirement-to-evidence-to-rule-to-decision lineage.
Agent Compliance Agent	Checks whether agents operate within authorised boundaries.
Hallucination Guard Agent	Rejects unsupported assertions and requires evidence references.
Evidence Citation Agent	Ensures material conclusions identify their supporting evidence.
Model Risk Monitoring Agent	Monitors agent performance, drift and exception patterns.
Agent Evaluation Agent	Continuously evaluates individual agent accuracy against outcomes.
Access Control Agent	Ensures agents access only permitted client data and tools.
Data Sovereignty Agent	Controls data processing according to residency and jurisdiction rules.

Post-Onboarding

Agent	Focused skills / responsibilities
Onboarding Closure Agent	Verifies fulfilment and formally closes onboarding.
Handover Agent	Creates structured handover to BAU servicing and monitoring.
Periodic Review Scheduling Agent	Determines the next review date from approved policy.
Trigger Event Agent	Interprets verified material client events and initiates appropriate review.
Continuous KYC Agent	Coordinates event-driven KYC refresh activities.
Client Change Agent	Assesses whether client-data changes require partial re-onboarding.

Operating Model and Guardrails

Not every agent should be an LLM

Deterministic agents: Policy rules, calculations, eligibility, risk scores, checklist generation and mandatory controls should call governed rules engines or deterministic services.

Retrieval and tool agents: Fetch data from CRM, client masters, registries, screening platforms, document stores and approved external providers.

Bounded reasoning agents: Handle evidence comparison, document understanding, ownership analysis and exception summarisation with structured, evidence-grounded outputs.

Human-decision agents: Assemble decision packages and route them to authorised humans rather than making decisions reserved for human judgement.

Core Agentic Pattern

Business Goal → Supervisor → Dynamic Plan → Specialist Agent Mesh → Evidence & Rules → Exception-based HITL → Fulfilment

The case is the persistent state; the process is dynamic. Rather than encoding the journey as a fixed BPMN sequence, the Onboarding Orchestrator continuously evaluates current case state, identifies the next required outcomes and delegates narrowly defined work to specialist agents.

Agent Contract — mandatory for every agent

Each agent should have: **(1)** one business purpose, **(2)** explicit input schema, **(3)** permitted tools and APIs, **(4)** authoritative sources, **(5)** structured output schema, **(6)** confidence thresholds, **(7)** prohibited decisions, **(8)** escalation conditions, **(9)** evidence requirements, and **(10)** a defined maximum autonomy level. This contract is central to making a 100+ agent architecture governable and reducing hallucination risk.
